

“MAKING OLD NEW AGAIN”

**4TH ANNUAL SYMPOSIUM ON
INFECTION CONTROL IN HEALTHCARE FACILITY
DESIGN AND CONSTRUCTION**

**Sunnybrook Infection Prevention and Control is pleased to announce
the return of the 4th Annual Symposium on Infection Control in
Healthcare Facility Design and Construction!**

The HFDC 2010 Symposium is the leading educational event that focuses on incorporating infection control into the design and construction of responsible healthcare environments. These patient environments contribute to the safety, operation, clinical outcomes, and financial success of healthcare facilities now and into the future.

The 4th Annual Symposium on Infection Control in **Healthcare Facility Design and Construction** is fast approaching and will be held on February 18th, 2010 in Toronto. We're proud to present this year's program focus "**Making Old New Again**".

Every medical construction project has at its core the desire to make better spaces for patients. The 2010 program line-up showcases the importance of infection control in our aging facilities and is sure to sell out for the 4th year in a row.

This unique event provides infection control professionals an educational forum that addresses the practical applications and solutions to applying infection control to facility design and construction. Information is presented by their peers and by experts in the industry including industry leaders, contractors, project managers, facility managers and healthcare architects.

This year's program will include:

- ❖ **Energy Renewal Challenges in Healthcare Facilities**
- ❖ **Understanding HVAC systems**
- ❖ **Construction projects at a hospital near you**
- ❖ **Construction and the impact on patient flow**

The sessions, presentations and displays will emphasize successful programs, technologies, and strategies that reflect and build on current provincial and national guidelines and standards on infection control during construction renovation.

SEE YOU IN 2010!
